Reduction in child mortality in Niger: a Countdown to 2015 country case study

*Agbessi Amouzou, Oumarou Habi, Khaled Bensaid, and the Niger Countdown Case Study Working Group**

Summary

Background The Millennium Development Goal 4 (MDG 4) is to reduce by two-thirds the mortality rate of children younger than 5 years, between 1990 and 2015. The 2012 Countdown profile shows that Niger has achieved far greater reductions in child mortality and gains in coverage for interventions in child survival than neighbouring countries in west Africa. Countdown therefore invited Niger to do an in-depth analysis of their child survival programme between 1998 and 2009.

Methods We developed new estimates of child and neonatal mortality for 1998–2009 using a 2010 household survey. We recalculated coverage indicators using eight nationally-representative surveys for that period, and documented maternal, newborn, and child health programmes and policies since 1995. We used the Lives Saved Tool (LiST) to estimate the child lives saved in 2009.

Links to Country Countdowns

- A case study can be useful in ***preparing for*** a country Countdown, but is not required
- Case studies can also ***follow*** a country Countdown event, to provide more in-depth understanding
- Case study proposals must include a plan for dissemination; if not a country Countdown, what?
