Are stillbirths stillborn on the global agenda?

1. Stillbirths do matter

Findings from *The Lancet* Stillbirth Series

2. Yet stillbirths still don't count

Hidden individual losses to global health agenda

3. Why change is possible

File photo: Reuters

Stillbirths matter for women

“No fetal heartbeat. These three words began the surreal journey of inducing labour and finally my daughter's stillbirth... In the weeks that followed I waded through each day trying to keep my head above an ocean of sorrow. I mostly hibernated...

I just wanted to stop breathing, to stop time moving me forward...”

Malika Ndlovu

Stillbirths matter for families

Giovanni Presutti CiaLapo

Over 7200 families a day experience a stillbirth....
Each is an individual, painful story

Whether they are famous or not, in a rich country or poor, the grief is overwhelming, and usually hidden

Follow up studies show that unresolved grief is common even 20 years afterwards

Stillbirths matter globally

THE LANCET

Stillbirth rates

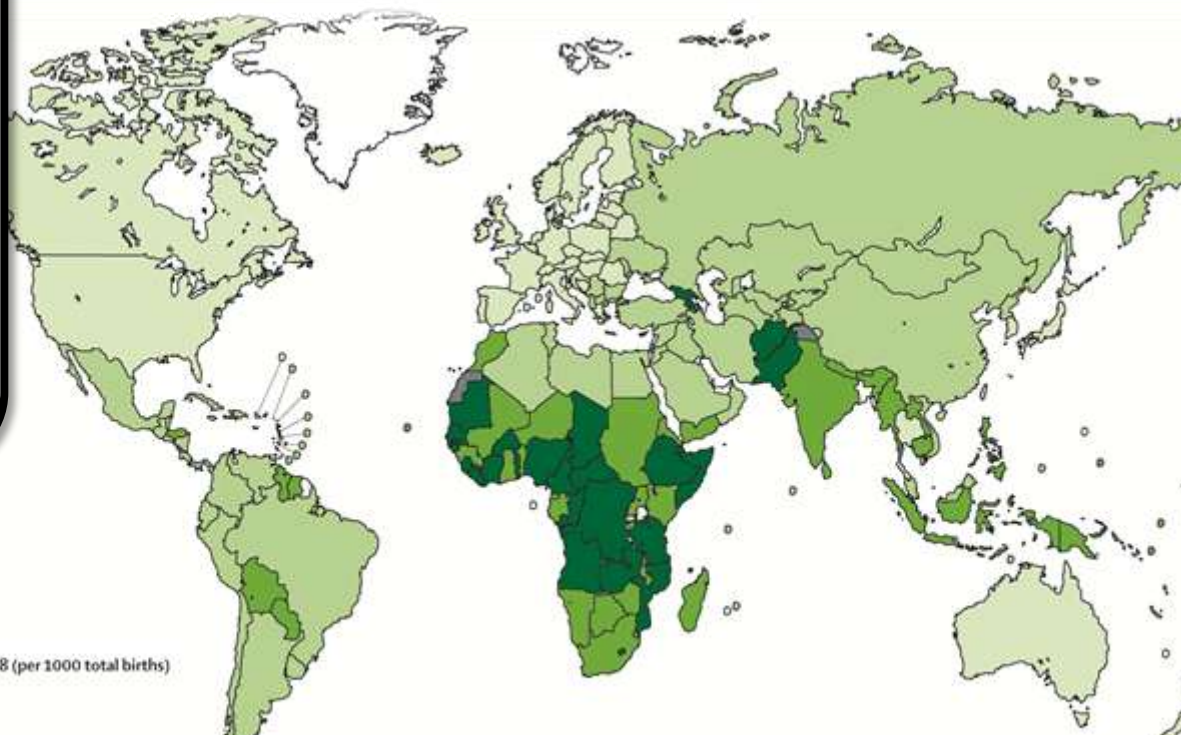

(deaths per 1000 livebirths)

Lowest countries

1. Finland (2)
2. Singapore (2)

Highest countries

192. Nigeria (42)
193. Pakistan (47)

10 countries

account for 66% of the world's stillbirths – 66% of neonatal deaths and 60% of maternal deaths

1. India
2. Pakistan
3. Nigeria
4. China
5. Bangladesh
6. Dem Rep Congo
7. Ethiopia
8. Indonesia
9. Tanzania
10. Afghanistan

2.6 million stillbirths

98% occur in low-income and middle-income countries

55% are for rural families in Africa and South Asia

Nearly half stillborn babies were alive at the start of labour

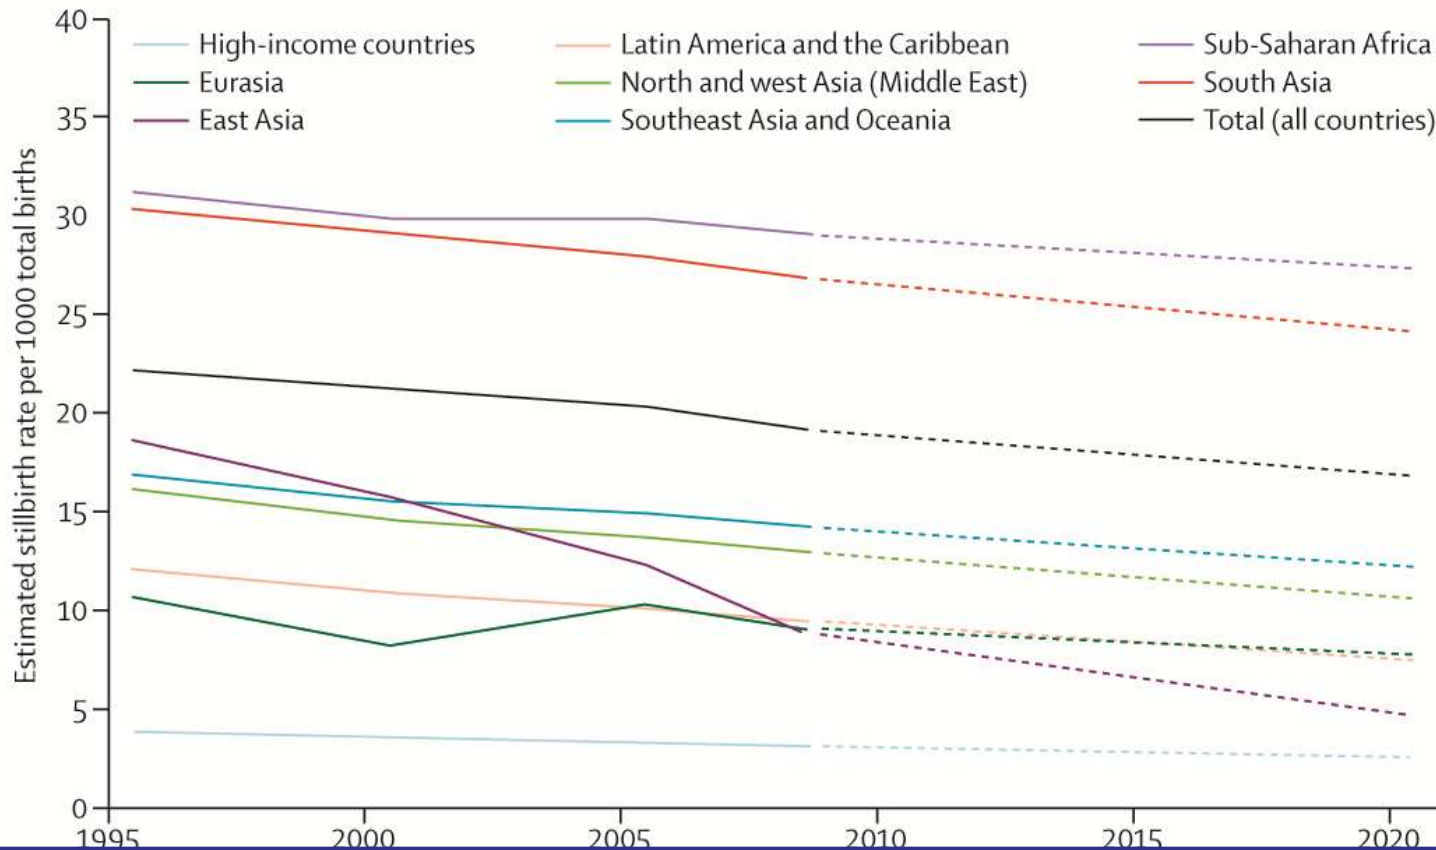

THE LANCET

The risk of stillbirth during labour (intrapartum) for an African women is 50 times higher than for a woman in the UK.

Things aren't changing fast enough for these babies...

THE LANCET

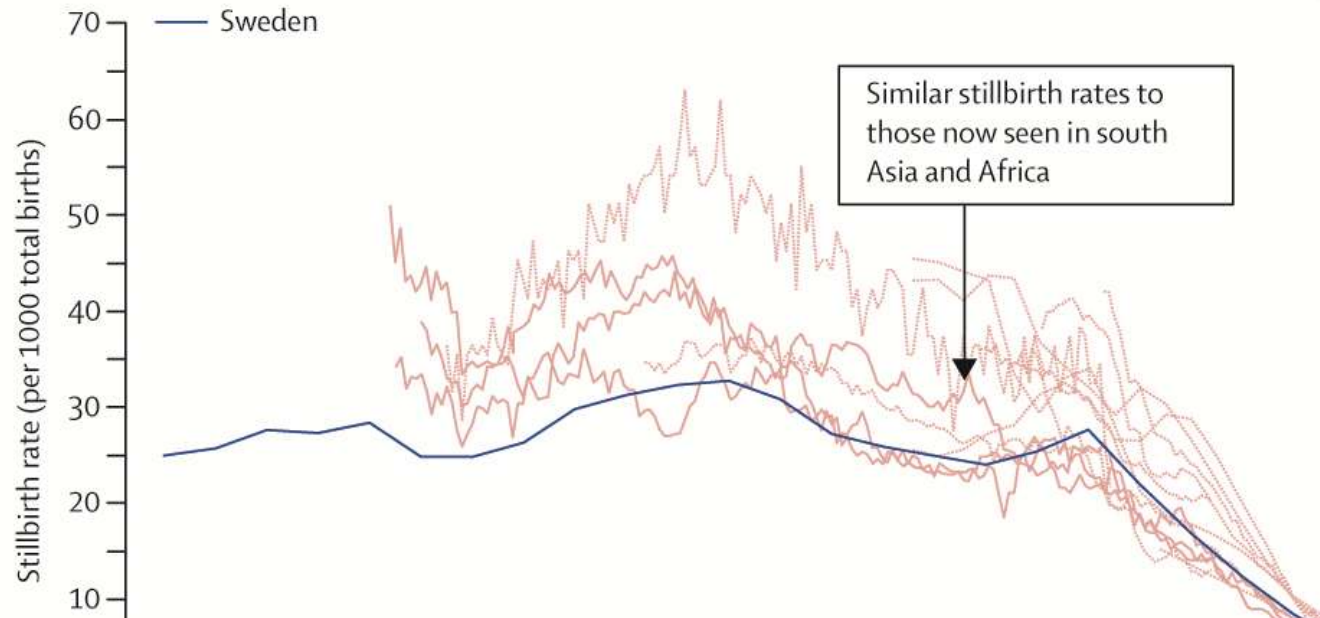

If the same progress continues, then by 2020 over 90% of all stillbirths will be in Africa and South Asia

Sub-Saharan Africa and South Asia have the slowest rates of decline

But change is possible

THE LANCET

Stillbirth rates halved 1950-1975 with improvements in infection treatment and obstetric care

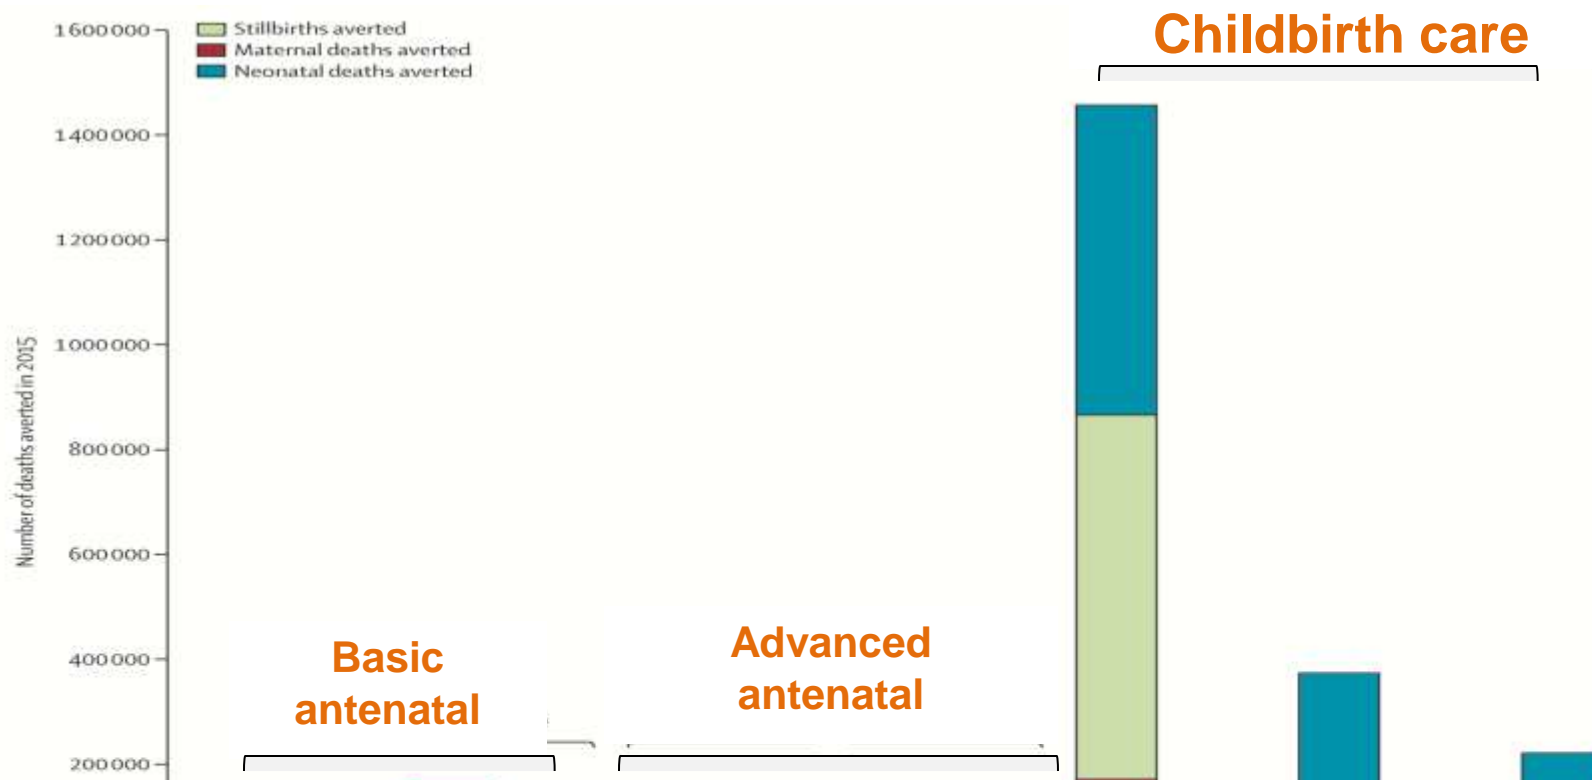

Colombia, Mexico and China halved their numbers of stillbirths over the past two decades

We know how to prevent stillbirths

	Interventions to prevent stillbirths		Universal coverage
			Stillbirths prevented
1	Periconceptual folic acid fortification	Basic antenatal care	27,000
2	Malaria in pregnancy - ITNs & IPTp		35,000
3	Syphilis screening and treatment		136,000
4	Hypertensive diseases in pregnancy and	Advanced antenatal care	57,000
5	Diabetes screening and management		24,000
6	Fetal growth restriction management		107,000
7	Induction of labor at or beyond 41 completed weeks		52,000
8,9,10	Obstetric Care (3 levels including CEmG)	Childbirth care	696,000
		Total Stillbirths Averted	1,134,000

1.1 million stillbirths could be prevented
But need higher coverage and quality of care

Childbirth care is one of the best health investments if you count women *and* babies

Deaths prevented: Stillbirths 1.1 million (45%)

Newborn deaths 1.4 million (43%)

Maternal deaths 201,000 (54%)

TRIPLE RETURN ON INVESTMENT

Making the case for investing in MNCH is stronger if we count stillbirths

THE LANCET

Childbirth care cost analysis:

Cost per maternal death prevented is **US\$54,350**

Counting newborns and stillbirths this becomes **\$3,920** per death prevented

In 68 priority countries (including 92% of all stillbirths):

Total additional running cost of **US\$ 2.32** per person per year for universal coverage with:

10 interventions for women, newborns and stillbirths plus 5 maternal and newborn specific interventions

Affordable given results of 2.7 million lives saved

Investment in maternal health should count the full effect

2. Yet stillbirths don't count ...

Hidden Individual Loss of Stillbirths

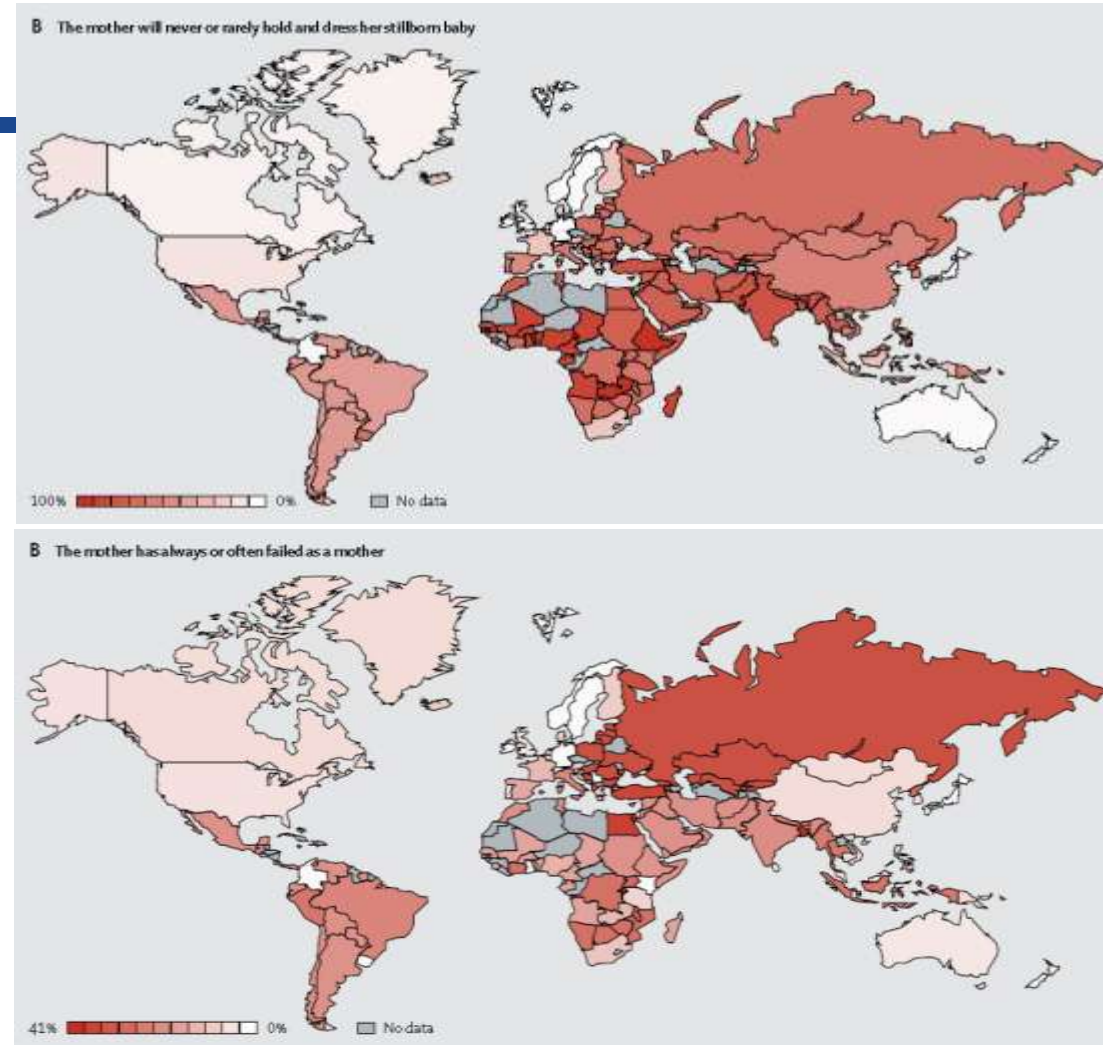

THE LANCET

Stillborn babies do not get societal recognition - rarely named, funeral rites or held, dressed by the mother.

One in four stillbirths is not seen by either the mother or her family.

Nearly one third of stillbirths are attributed to the mother's sins or evil spirits.

Many people believe that stillbirth is a natural selection process and that the baby was not destined to live.

Source: Frøen JF, Cacciatore J, McClure EM, et al, for The Lancet's Stillbirths Series steering committee. Stillbirths: why they matter. Lancet 2011; published online April 14. DOI:10.1016/S0140-6736(10)62232-5.

Invisible in global data and policy

1. Global data

- NOT routinely reported to World Health Organization
- NOT included in the Global Burden of Disease metrics
- NOT measured appropriately in most national surveys

2. Global goals

Stillbirths NOT counted in the MDGs although intimately linked to:

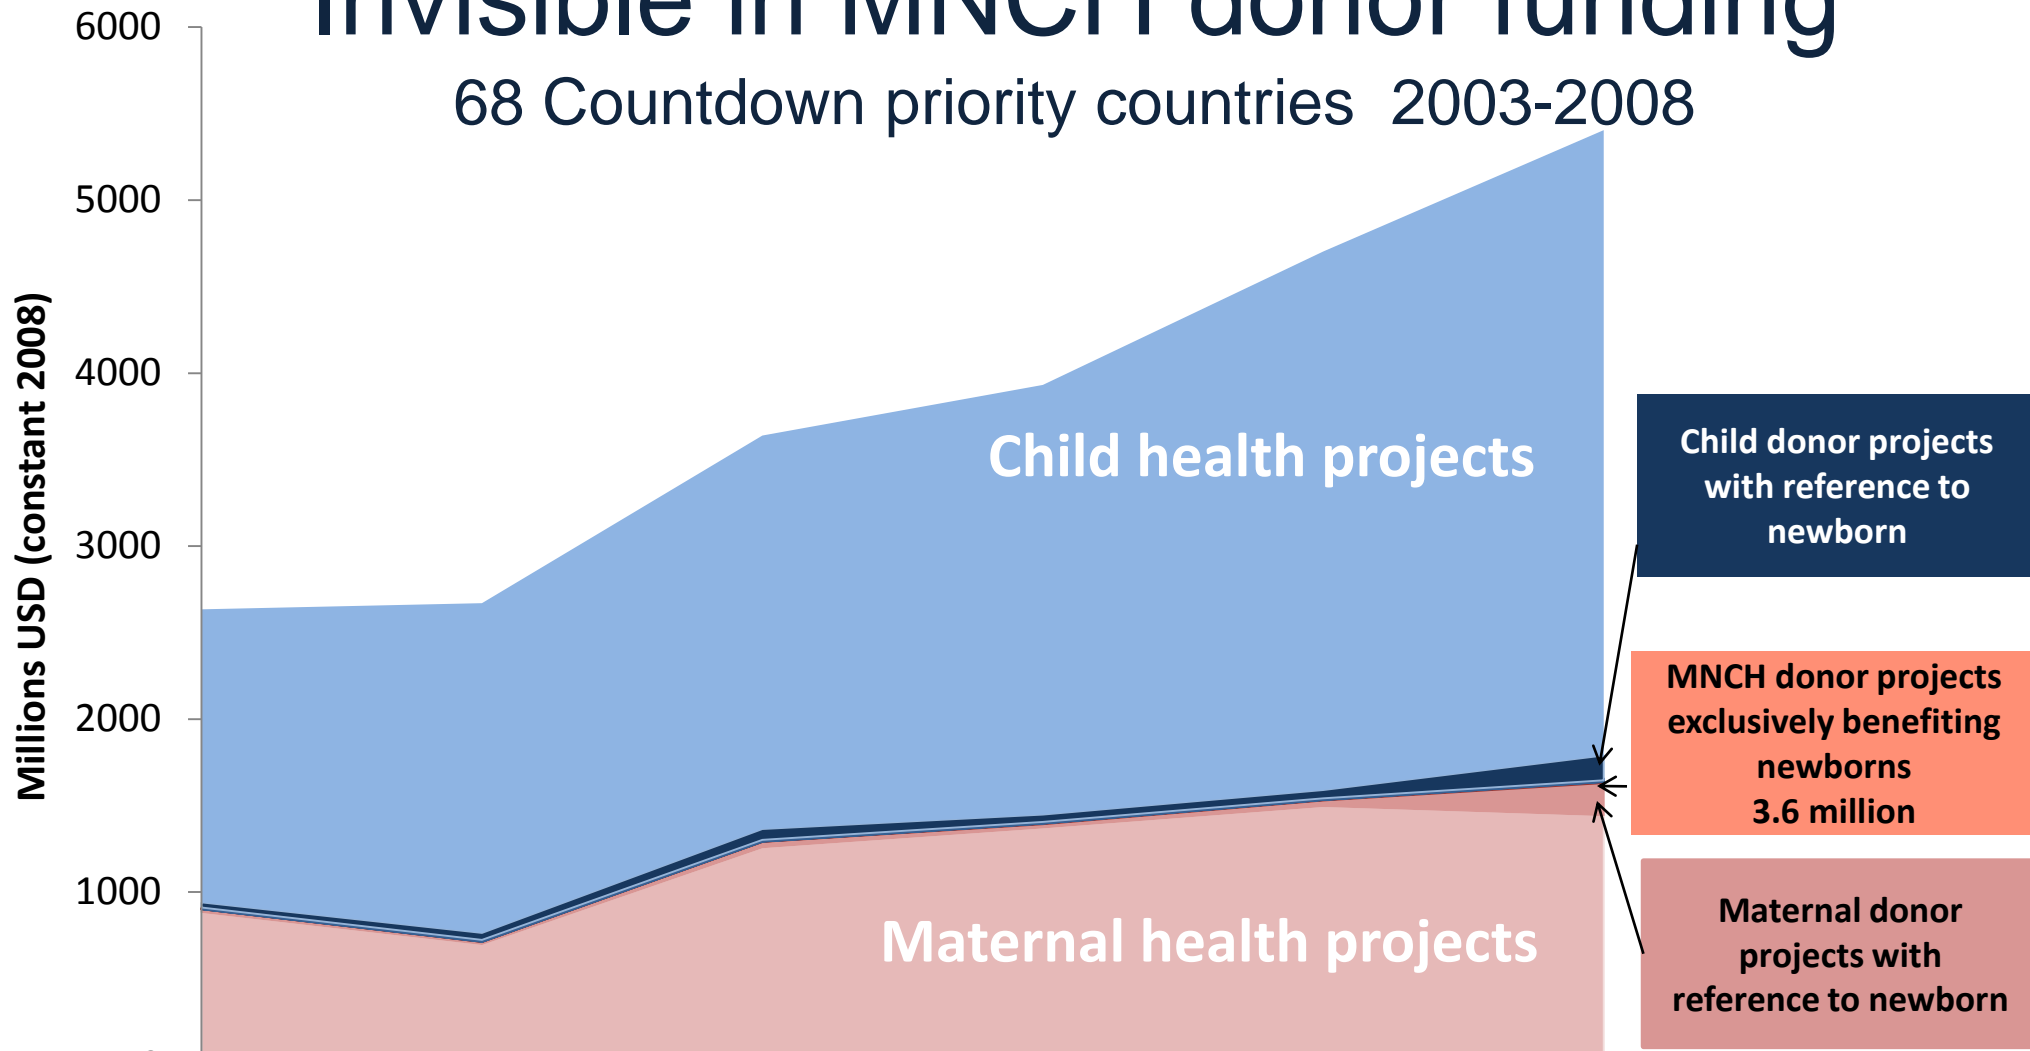

- Maternal health in MDG 5
- Neonatal deaths, accounting for 43% of child deaths in MDG4
- Poverty (MDG 1) and girls education (MDG2)

Stillbirths are still missing in national and international health policy and programmes

**Post MDG Consultation > 400 submissions
the word newborn came once, stillbirth no times.**

Invisible in MNCH donor funding

68 Countdown priority countries 2003-2008

Out of ~ 250,000 donor disbursements only 2 mention stillbirth

**ODA disbursement for MNCH doubled
but in 2008 just 6% of MNCH funding mentioned “newborn”**

3. Why change is possible for stillbirths

1. We have data and solutions

2011 – Lancet Stillbirth series	Cites
Stillbirth rate estimates for 193 countries	115
Risk Factors for stillbirth in high income countries	111
1. Invisibility of stillbirth: Making the unseen seen	44
2. Counting stillbirths: Where? When? Why?	83
3. Interventions: Evidence on what works	43
4. Implementation: Integrated care has triple benefit	34
5. High-income settings: Priority actions	70
6. 2020 vision: Goals and research priorities	32

2. Families voices are being heard

High income countries

Low and middle income countries

international
stillbirth alliance

“Thank you for listening to us. Now I have hope that others who loose their children like this in India can know they count”

Stillbirths Matter

3. Media and general public do care

Responses to *The Lancet* stillbirth series

1,000 individual news organisations, including 100 US television stations, 200 other television networks/ national television stations

Media reach assessment of almost 1 billion people

Launches in 7 cities

London
New York
Hobart
Geneva
Florence, Italy
Cape Town
New Delhi

- UK ranked 33rd in world league table on par with Belarus
- Women in Midlands most at risk of having stillbirths

The Washington Post
NATIONAL
Global stillbirths: 2.6 million a year, overlooked and often preventable
By David Brown, Wednesday, April 13, 10:41 PM
About 2.6 million babies are born dead each year, a largely ignored and silently grieved

“These papers, like no other *Lancet* Series before, have triggered a remarkable response not just from academia and organisations, but also from the public.”

Richard Horton *Lancet* editorial one month after

4. Professional organisations are ready to lead the change

“We believe that FIGO, IPA and ICM have a major part to play in saving the lives of millions of stillborn babies worldwide, especially in developing countries”

*G Serour, S Carbral, B Lynch
The Lancet, 2011*

Goal by 2020

- Countries with a current stillbirth rate of more than 5 per 1000 births to reduce their stillbirth rates by at least 50% from the 2008 rates
- Countries with a current stillbirth rate of less than 5 per 1000 births to eliminate all preventable stillbirths and close equity gaps

The key issue is a void of ownership

- In global newborn survival efforts, attention to stillbirths remains limited.
- In global efforts for maternal health, the woman's aspiration of a live baby is not a major focus.
- No one professional organisation group see that stillbirths “belong” to them and risks being left out by all.
- Parental groups are powerful, yet few countries have parent groups and strong champions, almost non-existent in low income

**Key opportunities include
Promise Renewed for Preventable Maternal Deaths
the Global Newborn Action Plan and
Return to Zero film**

Let's make it different

- Stillbirths count for women and families:
 - ~ A 'silent cry' that is never forgotten
- We know what works:
 - ~ Countries all over world can reduce stillbirths
- Counting stillbirths increases the case for investing in care around the time of birth:
 - ~ A triple return on investment

We all have a role to play

**Will we raise our voices and raise up our hands
to speak and act for these women and their stillborn babies?**

Stillbirths Matter
