Join Us for a Satellite Session at the 7th Global Symposium on Health Systems Research

Measuring effective coverage and quality of care to improve the health of women, children, and adolescents in LMICs

📅 Tuesday, November 1, 2022 🕒 8:30 AM - 12:00 PM Bogotá, Colombia

Standard coverage measures don’t account for quality of health services received by women and children and therefore don’t accurately reflect the impact of programs. In this interactive session, practitioners and academics from Countdown to 2030 and the Improve project will present:

- New evidence-based methods for calculating and interpreting effective coverage
- Perspectives on data use and translation into programs
- How to interact with data and reflect on its usefulness
